One contract may be correlating with another but does that mean there's causation. You must ask, "is one causing the other?"

That's what the R-Squared is for. Read R-Squared as follows: let's say, CLA and DJIA have an R-Squared of 0.44. That means there's a 44% chance that one is causing the market movement of the other.

You will always see a positive number for the R-Squared. If a correlation is a (negative) number, for example, (87.9) that means the two commodities are mirroring each other, not correlating. For example, today (which is 06/06/2007) the RBA and DJIA have a (87.9)% correlation. The R-Squared is 0.77. Therefore the two instruments are mirroring each other 88% of the time, and there's a 77% chance that one is causing the other.

### Conditionally formatted cells:

If there's an R-Squared equal to or greater than 80%, then, the cell will turn BLUE. That tells us that there's an 80% chance that one of the instruments is causing the other to move. HOWEVER, the gold and currency pages are set to 70% or greater. Lastly, If the cell is any other color, just ignore it. Other colors are 'notes' for me. --Thanks, Jim

How does this work on the ROLL? Formula's track the highest volume individual contract. For example, if we are rolling from Dec 2007 to March 2007, for the eCBOT, then, the day up to the 'top step change' Dec07 will be the highest volume traded contract. On the day of the switch, Mch08 will be the highest volume traded contract.

The formula will mix Dec07 and Mch08 until we've reached the 10th day of the change over. We always roll on the last trading day of the month. In this case it would be November 30th. So, by the tenth trading day of December the formula will have tracked the Mch08 contract entirely.

However, it doesn't matter. All that I'm concerned with is the highest volume contract and that's what the formulas track.

Furthermore, it works the same way for the Bund, Bobl, and Schatz; whatever contract is the highest volume contract, that's the contract the formula will take its data from.

Notes:

EURUSD, EURJPY, USDJPY, & USDGBP are all cash market products.  
Euro, Yen, Swiss Fr, Canadain \$, & BP are all CME products.

- 1) ALL Correlations are based on 10 day historical
- 2) CQG quotes prices in 32nds. That means you won't see ""32" on the end of my equations. I don't need to multiply by 32 to see the correct quote.

**TUF1** = Cash2yr Yield - 5 Year Futures  
 CQG Equation =  $\text{SHARESCALE}(\text{BUSP02}-(\text{FVA}?.5), \text{INTEGER1}) * 32$ ? Where FVA? is the 5yr electronic lead month futures contract.

**FYT1** =  $(\text{FV} * 1.5) - \text{TY}$   
 CQG Equation =  $((\text{FVA}?.5) - \text{TYA}?)$   
 Where: FV = 5 yr electronic futures; TY = 10 yr electronic futures

**FYT2** =  $(5 \text{ yr cash} - (\text{TY}?.7))$   
 CQG Equation =  $(\text{BUS05P} - (\text{TYA}?.7))$   
 Where: 5 yr cash = OTR; TY = 10 yr electronic futures

**NOB1** =  $(10 \text{ yr cash} - (\text{US}?.7))$   
 CQG Equation =  $(\text{BUS10P} - (\text{USA}?.7))$   
 Where: US = 30 yr electronic futures; 10 yr cash = OTR

**NOB2** =  $(\text{TY} - (\text{US}?.7))$   
 CQG Equation =  $(\text{TYA} - (\text{USA}?.7))$   
 Where: TY = 10 yr electronic futures; US = 30 yr electronic futures

**BASIS** is conversion factor.  
 Basis = Cash Price - (Futures Price \* Conversion Factor)

### FAQ

**Q:** Why do I have a column titled 'q' in certain places?

**A:** Those are q formulas I use within CQG. CQG is the engine behind my morning emails. They provide the quotes, I provide the formulas.

**Q:** Why are certain cells colored?

**A:** They help me identify what formula's need to be changed by hand and which are automated. There are over 9,000 formula's working behind the scenes to deliver the morning emails. I need some kind of system assist me in identifying certain formula's that need to be adjusted on new issues, rolls etc. I also use a color pattern for the treasuries to help with quick visual interpretation.
